What Are Heartbeat Alerts?

Alerts · https://logtivity.io/docs/heartbeat-alerts/

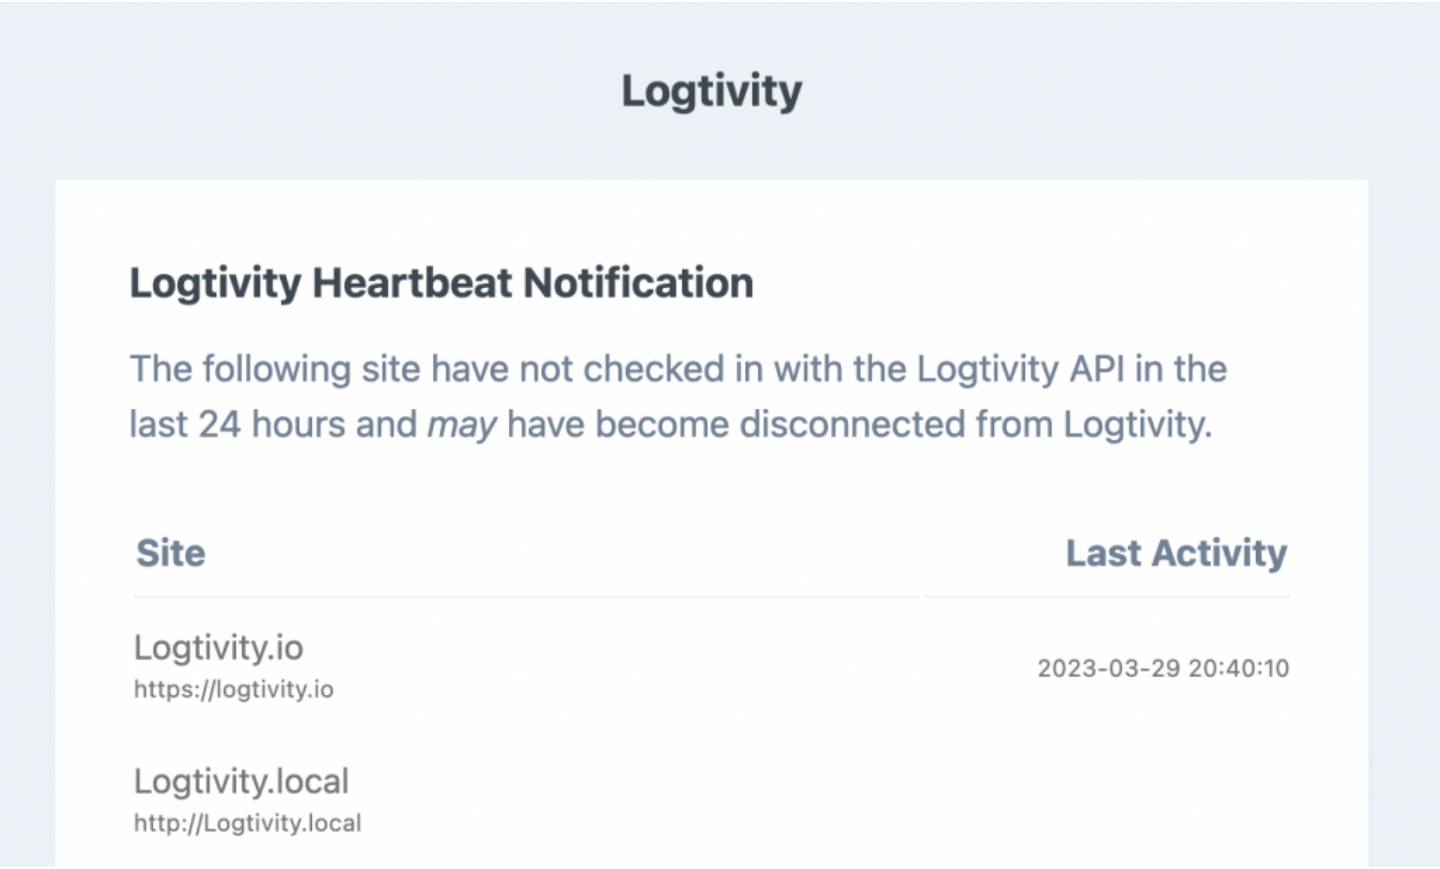

Logtivity has a "heartbeat" feature that makes sure your sites are always recording activity log data.

We will let you know if your sites have been disconnected from Logtivity.

You can enable the Heartbeat feature by going to the "Activity Alert Settings" area of the Logtivity dashboard. Make sure to check the box "Enable Logtivity Heartbeat".

Logtivity will check in with your site every hour. If we can't connect to your site, we'll send you a notification. We're also working on Slack notifications for the Heartbeat service.

The Heartbeat data will also show on the main Logtivity dashboard, under the "Last Checkin" column.
