Disable Activity Log Alerts for Specific IP Addresses

Activity Logs · https://logtivity.io/docs/ignore-ips/

Logtivity offers the ability to disable alerts when actions are recorded from specific IP addresses. This is useful if you don't want to get notifications about actions you or your team are triggering.

- Go to "Team Settings", and then "Activity Alert Settings" in your Logtivity dashboard.
- Enter any IP addresses you want to ignore into the "Ignore IPs" box.

Logtivity will still record activity from these IP addresses, but will not use that activity to trigger alerts.
